

The year is 2050. COVID-19 is but a distant memory for most people.

Mommy, who's this?

Why, it's PI Rxes!

PI Rxes

For helping fight COVID-19 with Fortitude, alongside MiRXES, A*STAR and Tan Tock seng Hospital.

In 2019, a terrible pandemic called COVID-19 spread quickly across the world.

By late January 2020, the virus arrived on Singapore's shores.

Detects
SARS-CoV-2 RNA
in patient samples

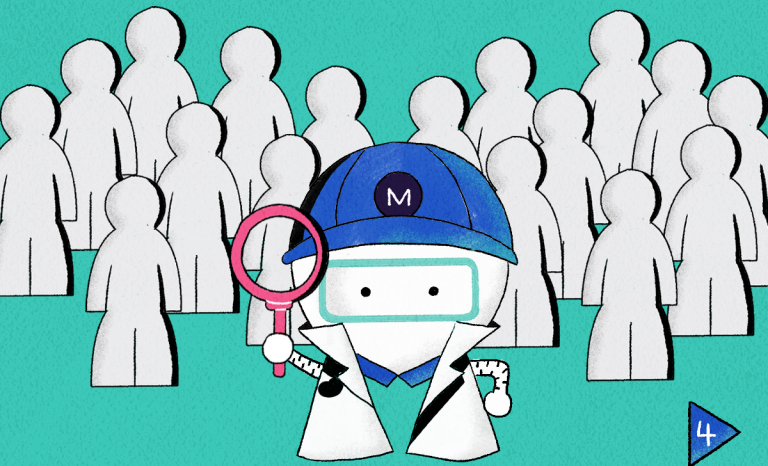

Contains 200
tests/kit

In just three weeks, scientists from A*STAR and Tan Tock Seng Hospital created the first made-in-Singapore COVID-19 test kit, Fortitude.

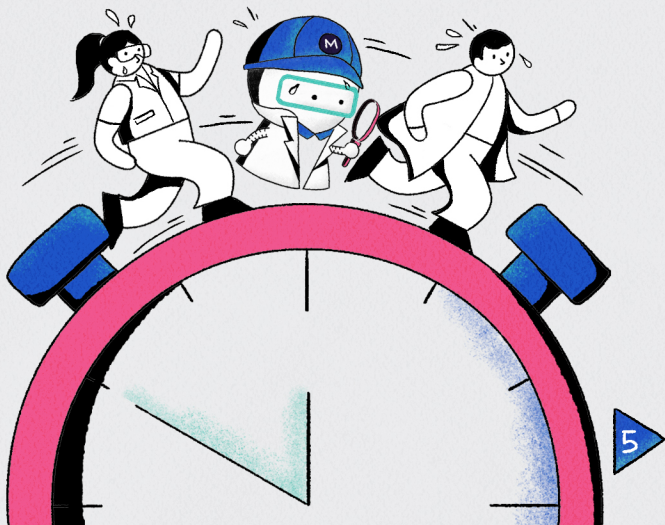

But now the scientists had a bigger problem: how could they make enough Fortitude test kits for Singapore—and even the world?

Enter PI Rxes and the MiRXES team!

Within just one week of being activated,
MiRXES manufactured the first 2,000
Fortitude tests in February 2020.

Racing against time, the team worked tirelessly to manufacture **one million Fortitude tests in three months**—something they had never done before.

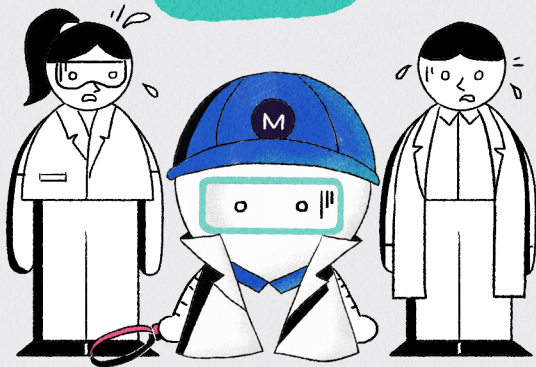

All flights are
cancelled!!!

Raw materials
are delayed!!!

No space!!!

Deliver 20,000
tests ASAP!!!

We want to buy
one million tests!!!

It wasn't easy. PI Rxes and the MiRXES
team faced many challenges along the way.

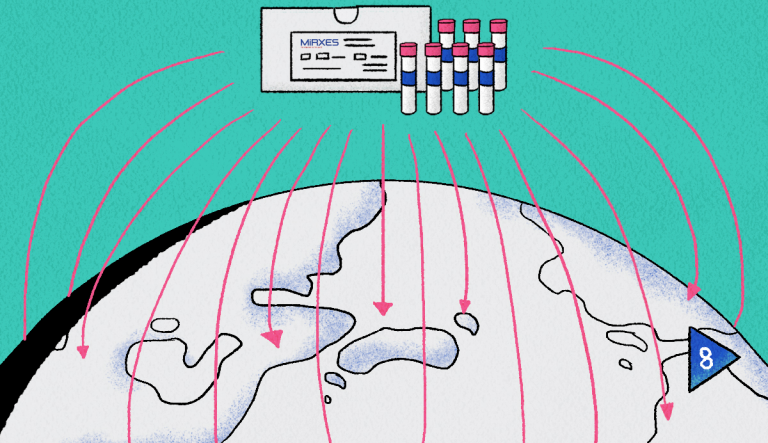

But with hard work, support and literal fortitude, MiRXES made it through.

The Fortitude test kits have since made it to all corners of the globe—helping countries turn the tide in the fight against COVID-19.

Even after COVID-19 ended, the work done by PI RXes and MiRXES later allowed them to successfully deliver tests for early cancer detection worldwide.

That's why it's so easy to detect cancer early today!

Long live PI Rxes and all the brave
frontliners in the COVID-19 pandemic!
