

while the Northern Hemisphere may
be on the cusp of spring, winter is
coming down in the south.

I don't feel so well.

what if I have the flu—or worse,
COVID-19???

who are you?

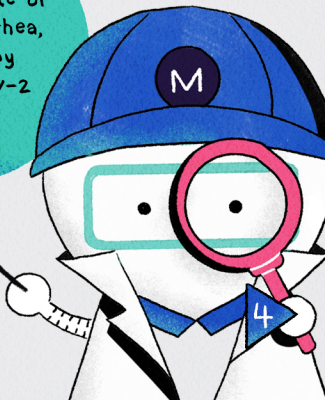

sounds like you have a
molecular mystery in
your hands! My name is
PI Rxes and I can help
you figure out whether
you have the flu or
COVID-19.

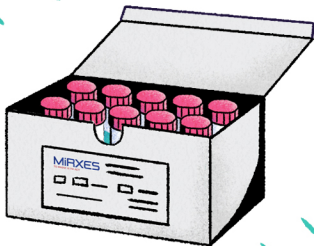

Though flu and COVID-19 have similar symptoms, they're caused by different viruses!

Caused by
Influenzavirus

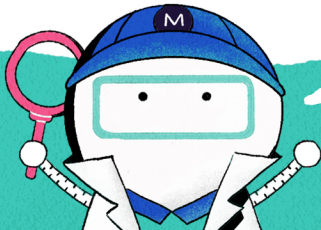

Loss of taste or
smell, diarrhea,
caused by
SARS-CoV-2
virus

Fever, cough, fatigue,
sore throat, runny nose

The MIRXES Fortitude SARS-CoV-2 & Flu A/B test detects and amplifies small amounts of these two viruses, letting you know if you have either of them—or not!

After taking the test

Looks like you're in the clear!
Turns out you don't have the flu or
COVID-19...just the common cold.
